FULL TEXT

ISBN: 9781848212886
TITLE: Constraint programming in music.
AUTHOR: Ed. by Charlotte Truchet and Gérard Assayag.
PUBLISHER: ISTE/Wiley
PUBLISH DATE: 2011
PAGES: 221
PRICE: $95.00
BINDING: Hardcover
LIBRARY OF CONGRESS CLASSIFICATION: MT56
REVIEW: Computer scientists describe the principles and techniques they use to develop constraint systems appropriate for music, and composers and musicians explain why and how they use such systems. They cover modeling temporal constraints for a system of interactive scores, variable orderings for solving musical constraint satisfaction problems, constraints for an unfolding time, global constraints in orchestration, using Gecode to solve musical constraint problems, concurrent constraint models of music interaction, from rhythm rules to music rules, and the OMClouds library for musical constraints.
